

Guidelines for articles submitted to the Journal of the International Perforating Forum.

1. Subject matter
 - a. Technically substantive, previously-unpublished, original work
 - b. NO case studies or commercial content
2. Article structure
 - a. See next page
3. Maximum length (not including images) = 12 pages
4. Please include with article submission, head shot photos and short bios for each author
5. Inquiries to journal@perforators.org

Article Structure

Executive Summary

Summarize the article's key objectives and takeaways. No new information should be included here that is not included in the main article itself.

Introduction

State the objectives and motivation for the work, providing an adequate background. Include literature references as appropriate.

Program description (*customize this section title as necessary*)

This is the primary description of the work done – the essential substance of the paper. Provide sufficient detail to allow the work to be reproduced. Describe methods and materials used. Methods already published should be indicated by a reference; only relevant modifications or new/novel methods should be elaborated in detail.

Theory/calculation

If appropriate, a dedicated section should be included to explain the relevant theoretical aspects of the central work presented in the article. A calculation section (either separate or combined with the theory section) should be included as needed to demonstrate application of the theory.

Results

Results should be clear, concise, and follow logically from the program described in above sections.

Discussion

This should explore the significance and implications of the results from the work, not simply repeat the results themselves. This may be a stand-alone section, or combined with Results.

Conclusions

This should be a brief summary of the work done, key results, and key takeaways. This may be a stand-alone section, or combined with the Discussion section.

References

Please ensure that every reference cited in the text is also present in the reference list (and vice versa).

Appendices

If there is more than one appendix, they should be identified as A, B, etc.
